A photograph of a rustic living room. The room features a large fireplace with a brick surround and a wooden mantel. To the left of the fireplace is a built-in wooden bookshelf filled with books and decorative items. The walls are paneled with light-colored wood, and the ceiling has exposed wooden beams. A large, oval-shaped rug with concentric red, blue, and white stripes covers the floor. In the center of the room is a small round wooden table with a glass dome on top. To the right, there is a red sofa and a wooden chair. A window on the right is covered with a colorful patterned curtain. A white text box is overlaid on the left side of the image.

COVER . . . Room with a bountiful view. Radiant, glowing windows and walls of Western Pine bring beauty to the inside, frame it from the outside.

Tradition never dies, and Early American never tires. Knotty Pine paneling and woodwork is as important to Colonial as the hooked rug and ladder-back chair.

The wood of the tall and majestic pine tree was America's first utilized resource. More than 950 years ago Leif Erikson and his Viking explorers, in search of timber for shipbuilding, visited the shores of New England and sailed back to Greenland with a cargo of pine logs.

Six hundred years later the British rediscovered the value of the New World's pine timber, both as a colonial building material and as an exportable commodity. From that time forward pine has been a prized possession of mankind. Many of the colonists' earliest homes and public buildings, constructed entirely of pine, stand solidly today, silent testimonials to the wood's beauty and durability.

When the lumber industry moved westward, the Western Pines—Idaho White Pine, Ponderosa Pine and Sugar Pine—became the nation's most widely used lumber for all-around building purposes. Today they rank as the most versatile of all woods for sturdy framing, for handsome siding and for beautiful woodwork.

Carefully seasoned Western Pines are inherently adaptable to any architectural treatment from traditional Early Ameri-

can to advanced Modern. The ready reception of these cheerful woods to all types of finish treatment—gleaming enamel, colorful paint, distinctive stains, varnishes and lacquers—lends them beautifully to paneling, windows, doors, mouldings and other interior woodwork.

Outdoors, the rugged resiliency of the friendly Western Pines provides long-lasting protection against the storms of winter and the heat of summer. Outside or inside, maintenance is simple and easy, for paint, stains and varnishes cling to these durable woods and they're speedily cleaned or waxed.

The soft-textured Western Pines will always be available in generous supply. Modern industrial forestry—the practice of Tree Farming—assures that continuous new crops of even-grained pines are constantly being grown for the families of tomorrow, replacing the ripe old timber harvested for the homes of today.

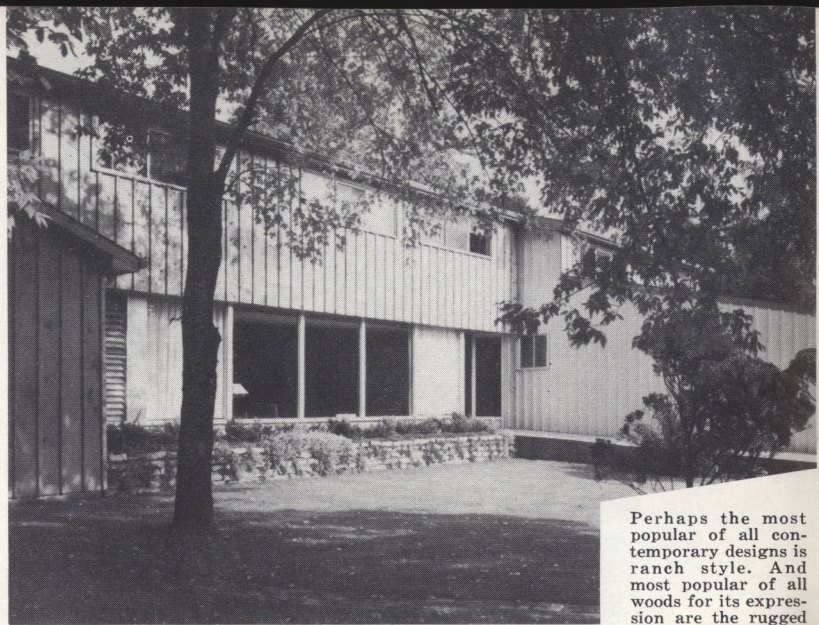

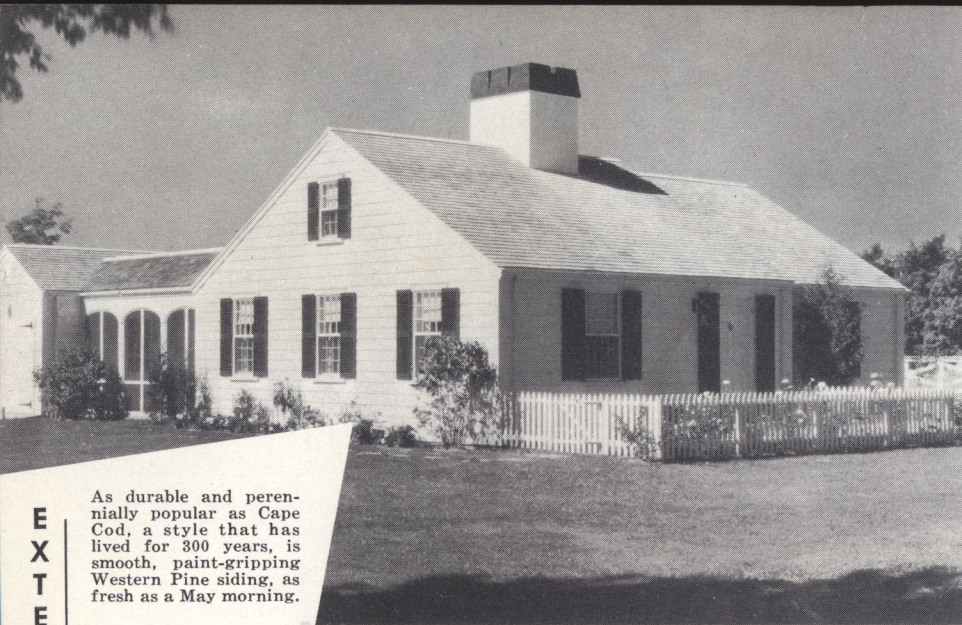

For your new home, or for your next modernizing project, select one of the handsome, versatile Western Pines. See your retail lumber dealer today. He'll be glad to furnish friendly advice on sizes, grades, patterns or costs.

The modern American kitchen is the envy of housewives the world over. Engineered for efficiency, very nearly automatic, it's one of the most pleasant rooms in the house.

But it hasn't always been that way. Evolving through generations, the kitchen came into its own when the machine age and the high cost of help conspired to bring the housewife back into it. At the time the prevailing decor was that of a clinic . . . white, dazzling and sterile. And it wasn't long before the lady of the house grew tired of it.

So color came to the kitchen, and with it the Knotty Western Pines, those versatile woods so adaptable to the limitless range of color stylings. Today's kitchen is a tone poem in color, individually finished to the taste of the individual owner. Such as this one, and many more on the following pages, all built with Western Pine, a durable wood, simple to clean and so easy to live with.
